

Footnote examples^{*}

Michael Sharpe[†]

January 10, 2024

The standard LaTeX document classes `article`, `report` and `book`, the macro `\maketitle` \lets `\footnote` to `\thanks` and footnote marks are taken from a specified list of symbols. (In the AMS classes¹ the title footnote marks will appear only in the footnote itself at the bottom of the page.)

Footnotes after `\maketitle` use by default numeric markers beginning at 1, in some form^a smaller than lining numbers. (Footnotes in minipages use lowercase letters^b as markers.)

^aBest not using scaled-down lining figures.

^bitalic except in KOMA classes

This footnote page snippet was prepared with `lualatex` using the preamble:

```
\documentclass[11pt]{article}
\usepackage{trace}
\usepackage[margin=1.1in]{geometry}
\usepackage[parfill]{parskip}
\usepackage[p]{newpxtext} % larger sups figures
\usepackage[npx,supcolor=red!70!black]{superiors}
\title{Footnote examples\footnote{with newpxtext}}
\author{Michael Sharpe\thanks{Thanks much.}}
```

^{*}with newp_xtext

[†]Thanks much.
