

1 The Croatian language

The file `croatian.dtx`¹ defines all the language definition macros for the Croatian language.

For this language currently no special definitions are needed or available.

The macro `\LdfInit` takes care of preventing that this file is loaded more than once, checking the category code of the `@` sign, etc.

```
1 {*code}
2 \LdfInit{croatian}\captionscroatian
```

When this file is read as an option, i.e. by the `\usepackage` command, `croatian` will be an ‘unknown’ language in which case we have to make it known. So we check for the existence of `\l@croatian` to see whether we have to do something here.

```
3 \ifx\l@croatian\@undefined
4 \@nopatterns{Croatian}
5 \adddialect\l@croatian\fi
```

The next step consists of defining commands to switch to (and from) the Croatian language.

`\captionscroatian` The macro `\captionscroatian` defines all strings used in the four standard documentclasses provided with L^AT_EX.

```
6 \addto\captionscroatian{%
7 \def\prefacename{Predgovor}%
8 \def\refname{Literatura}%
9 \def\abstractname{Sa\@v{z}etak}%
10 \def\bibname{Bibliografija}%
11 \def\chaptername{Poglavlje}%
12 \def\appendixname{Dodatak}%
13 \def\contentsname{Sadr\@v{z}aj}%
14 \def\listfigurename{Popis slika}%
15 \def\listtablename{Popis tablica}%
16 \def\indexname{Indeks}%
17 \def\figurename{Slika}%
18 \def\tablename{Tablica}%
19 \def\partname{Dio}%
20 \def\enclname{Prilozi}%
21 \def\ccname{Kopije}%
22 \def\headtoname{Prima}%
23 \def\pagename{Stranica}%
24 \def\seename{Vidjeti}%
25 \def\alsoname{Vidjeti i}%
26 \def\proofname{Dokaz}%
27 \def\glossaryname{Kazalo}%
28 }%
```

¹The file described in this section has version number v1.3l and was last revised on 2005/03/29. A contribution was made by Alan Paić (paica@cernvm.cern.ch).

`\datecroatian` The macro `\datecroatian` redefines the command `\today` to produce Croatian dates.

```

29 \def\datecroatian{%
30   \def\today{\number\day.\~\ifcase\month\or
31     sije\v{c}nja\or velja\v{c}e\or o\v{z}ujka\or travnja\or svibnja\or
32     lipnja\or srpnja\or kolovoza\or rujna\or listopada\or studenog\or
33     prosinca\fi \space \number\year.}}

```

`\extrascroatian` The macro `\extrascroatian` will perform all the extra definitions needed for the Croatian language. The macro `\noextrascroatian` is used to cancel the actions of `\extrascroatian`. For the moment these macros are empty but they are defined for compatibility with the other language definition files.

```

34 \addto\extrascroatian{}
35 \addto\noextrascroatian{}

```

The macro `\ldf@finish` takes care of looking for a configuration file, setting the main language to be switched on at `\begin{document}` and resetting the category code of `@` to its original value.

```

36 \ldf@finish{croatian}
37 \</code>

```
